

Multiphysics Associated Events:

15-16 November 2016
Copenhagen, Denmark
Third NAFEMS European
Multiphysics Simulation
<https://www.nafems.org/events/nafems/2016/multiphysics-simulation-european-conference/>

25-28 September 2016
Beijing, China
Fifth International Symposium on
Explosion, Shock wave and High-
strain-rate Phenomena
<http://eshp2016.cn/>

21-22 January 2015
Lille, France
Conference on SPH and Mesh free
Methods for : Fluids and Fluid
Structure Interaction
<http://gdr-ifs.univ-lille1.fr/>

21-22 October 2014
Manchester, UK
Second NAFEMS European
Conference on Multiphysics
<http://www.nafems.org/mp2014>

19-20 June 2014
Marseille, France
SimBio-M : BioMechanics,
BioMaterials and BioMedicine
<http://simbio-m.ifsttar.fr/>

If you are interested in organising an event associated with The International Society of Multiphysics, please contact the Society Coordinator.

Multiphysics Student Award:

The International Society of Multiphysics welcomes all students and encourages them to participate in the annual Multiphysics conference by submitting an abstract of their work. A panel of judges will recommend the award of a prize to the winner of the competition. The previous winners of this award were:

2015: U. Ali, Salford University, UK

2014: A. Pedersen, Arctic University, Norway

2013: M. Khan, Cambridge University, UK

2012: H. Frid, KTH, Stockholm, Sweden

2011: P. Dongmei, PolyU, Hong Kong

2010: M. Shibuta, Kumamoto University, Japan

2009: H. Khawaja, Cambridge University, UK

Membership and Contact:

Hassan Abbas Khawaja

MULTIPHYSICS

Newsletter 2016

www.multiphysics.org

The International Society of Multiphysics:

Multiphysics analysis has been developed over the recent past to better represent the behaviour of complex processes by the use of simultaneous modelling of a number of systems. This development is driven by the industrial need to further the understanding of real physical phenomena in order to develop and design safer and more efficient products which are environmentally friendly. Such analyses and investigations were impossible to perform a number of years ago due to a lack of powerful computing systems.

The International Society of Multiphysics acts as a focus for studies, which demand simultaneous addressing of hitherto separate physical disciplines and combining them to generate relational mathematical models and validate them with controlled experiments to enhance the understanding of natural behaviour with a view to improving the quality of lives and promote an environmentally sustainable future.

The aim of the society is to enable all those interested in Multiphysics to discuss and disseminate the most up-to-date research findings for purposes of product and process improvements. This will encompass maximisation of Multiphysics dialogue across national borders at all levels, collaboration between researchers, institutions, industry and governments, and development of curriculum for the higher education sectors worldwide.

The objective is to be recognised by all relevant agencies as a society which promotes the integration of multi-disciplinary sciences and contributes to the future needs of scientific advancement.

The International Journal of Multiphysics:

The International Journal of Multiphysics publishes peer-reviewed original research articles, review papers and communications in the broadly defined field of Multiphysics. The emphasis of this journal is on the theoretical development, numerical modelling and experimental investigations that underpin Multiphysics studies. Articles include fundamental developments as well as industrial applications.

The scope of the journal is to address the latest advances in theoretical developments, numerical modelling and industrial applications which will promote the concept of simultaneous engineering. Typical combinations would involve a selection from subject disciplines such as Acoustics, Electrics, Explosives, Fire, Fluids, Magnetism, Soil, Structures, and Thermodynamics.

Special Issues:

2016: 'Icing and Cold Technology'. Dr. H. Khawaja and Prof. M. Moatamedi

2015: 'SPH and Mesh free Methods'. Prof. M. Souli and Dr. J. Wang

2014: 'Simulation of Pressure Vessels and Piping'. Prof. A. Barbosa de Lima and Prof. A. Silva

2013: 'Two Phase Computational Fluid Dynamics Applications'. Assoc. Prof. G. Polanco and Prof. F. Malpica

2012: 'Marine Applications of Composite Structures and Materials'. Prof. Y. Kwon and Dr. Y. Rajapakse

2011: 'Multiphysics Simulations - Advance Methods for Industrial Engineering'. 1st Fraunhofer Multiphysics Conference

The International Conference on Multiphysics:

The objective of the conference is to share and explore findings on mathematical advances, numerical modelling and experimental validation of theoretical and practical systems in a wide range of applications.

The scope of the conference is to address the latest advances in theoretical developments, numerical modelling and industrial application which will promote the concept of simultaneous engineering. Typical combinations would involve a selection from subject disciplines such as Acoustics, Electrics, Explosives, Fire, Fluids, Magnetic, Nuclear, Soil, Structures and Thermodynamics.

In the past, Multiphysics Conferences have been organised in Zürich-Switzerland, London-United Kingdom, Sofia-Bulgaria, Amsterdam-The Netherlands, Lisbon-Portugal, Barcelona-Spain, Kumamoto-Japan, Lille-France, Narvik-Norway, Manchester-United Kingdom and Maribor-Slovenia. Researchers from all around the world participated in these events. The Organisers and the Management Committee are thankful to all attendees for making these events successful.

The twelfth International Conference on Multiphysics will be organised in Beijing, China on 14-15 Dec 2017. Please find further details in The International Conference on Multiphysics 2017 Announcement and Call for Papers leaflet.

MULTIPHYSICS 2017
14-15 December 2017
Beijing, China
